What is Microsoft Copilot Studio?

Copilot Studio

Copilot Studio is a platform to build conversational experiences that **connect to** knowledge and data from **Business Central** and can **operate standalone**.

✓ Meet your users where they already are

✓ Access everything in one place

✓ Automate your workflows

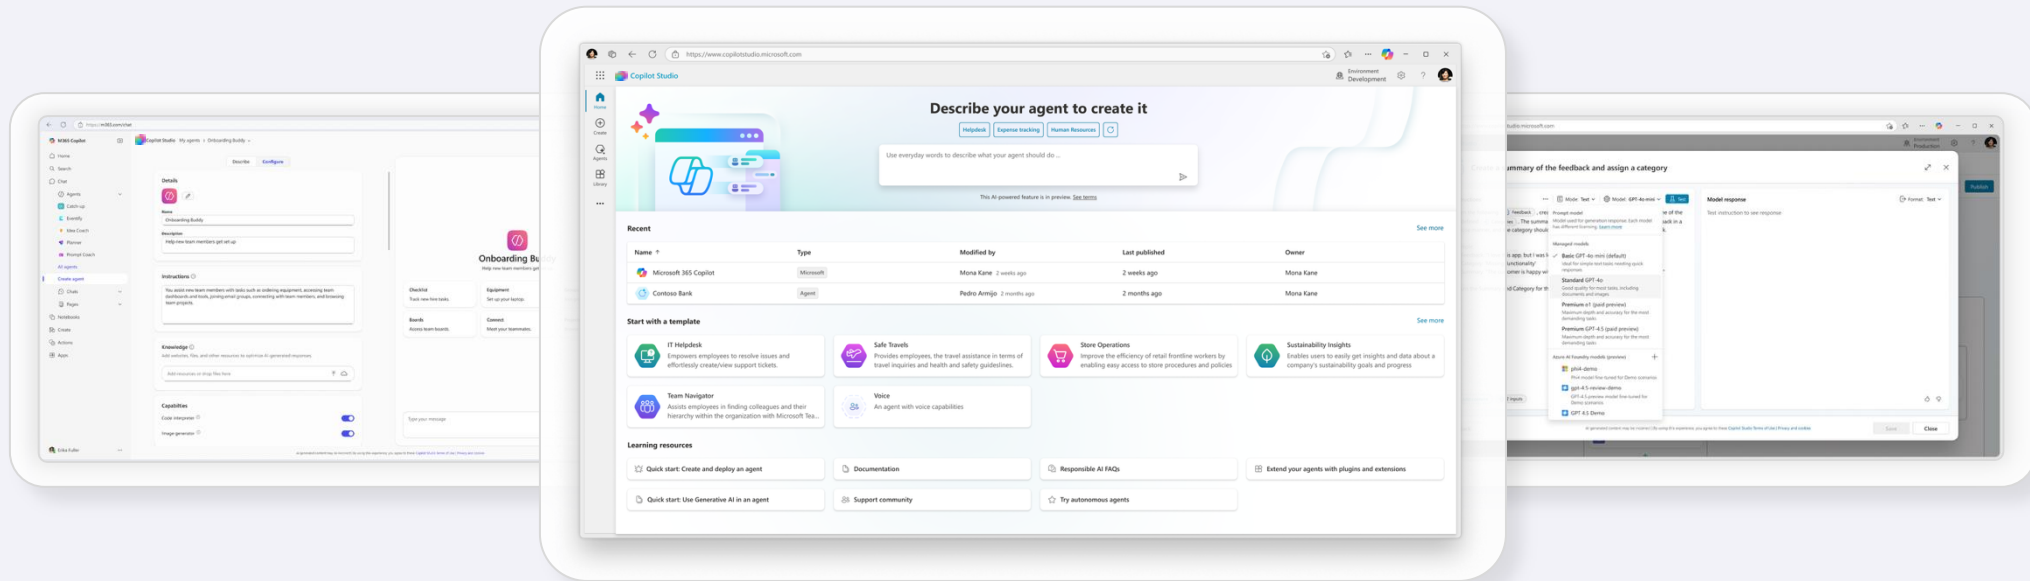

✓ Integrate with your external apps

✓ Connect to your data (Business Central, Microsoft 365, ...)

Microsoft Copilot Studio

Build, manage and secure AI agents

Lite experience

Build agents with natural language right inside Microsoft 365 Copilot

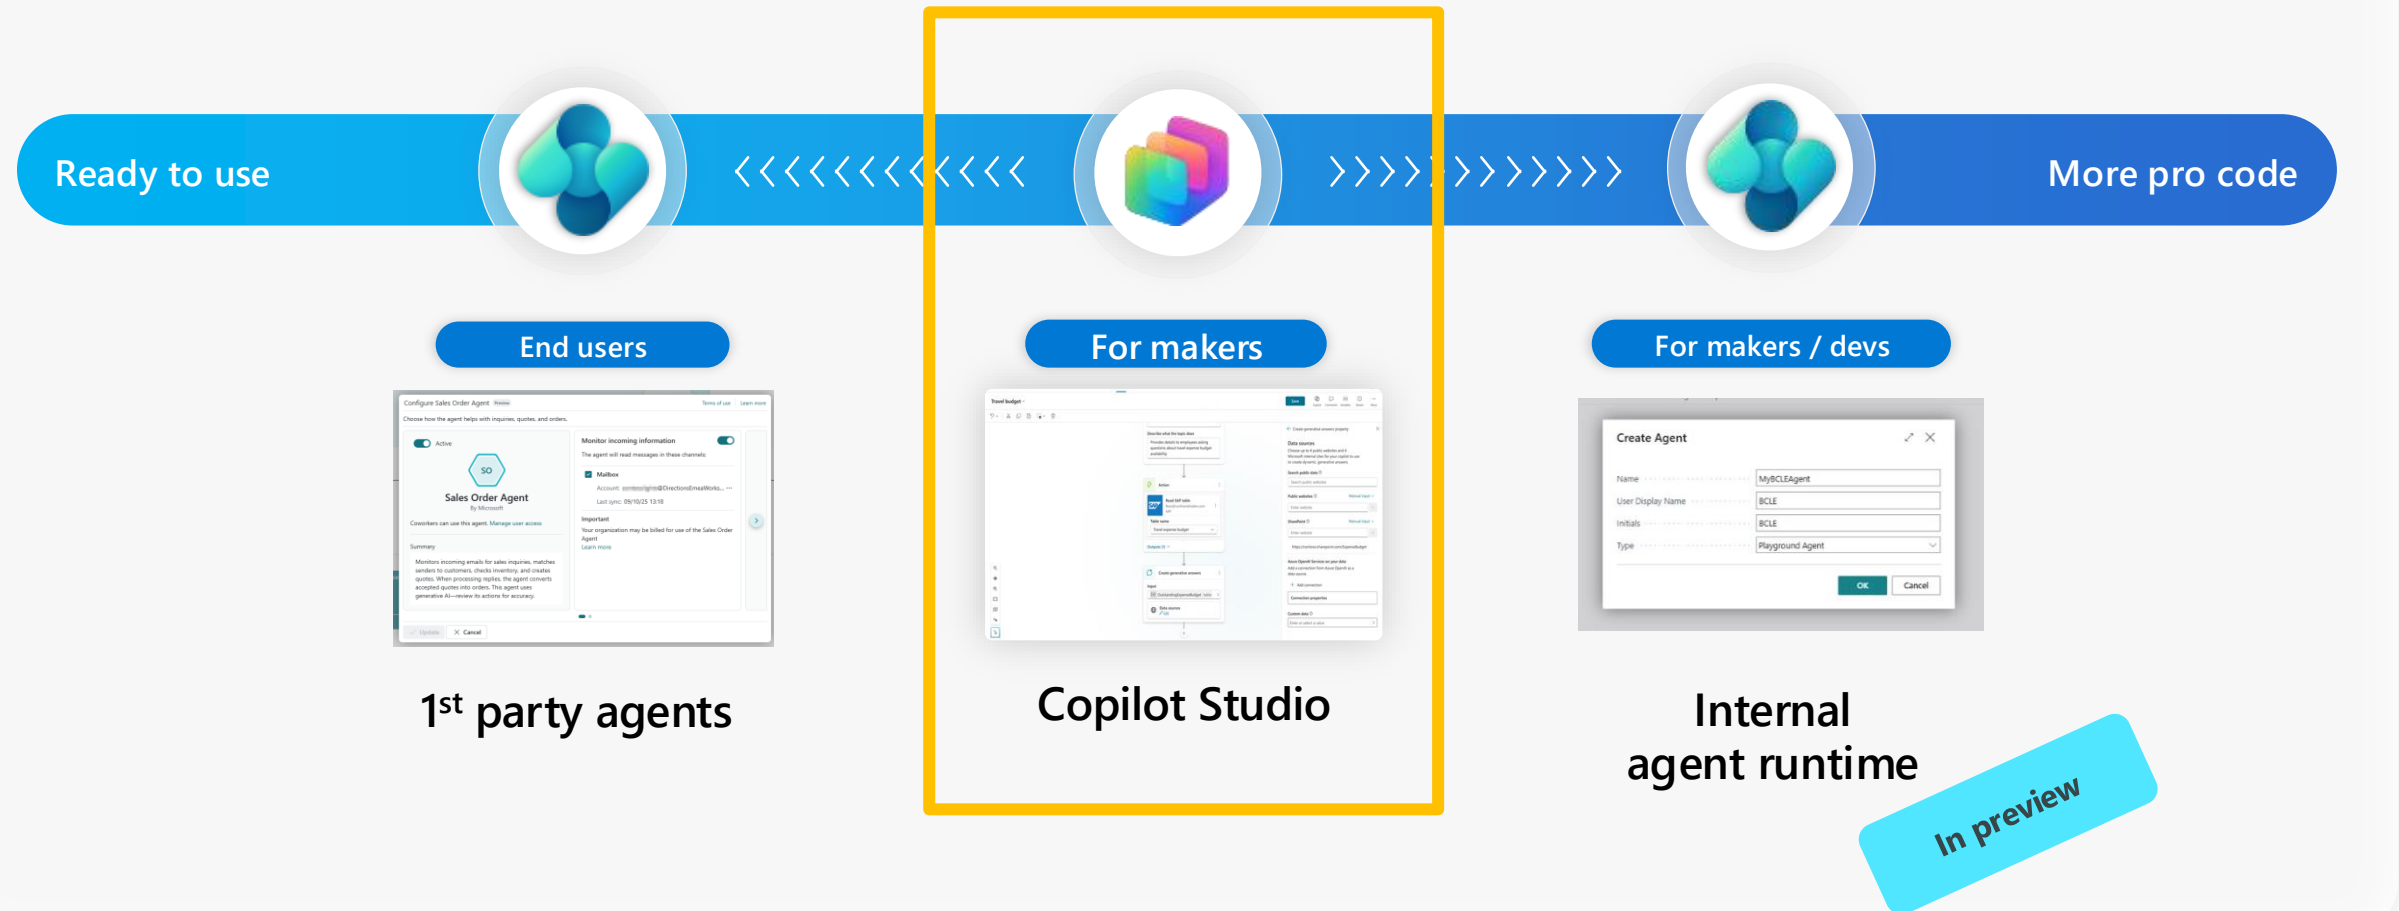

Full experience

Access a complete set of intuitive tools and capabilities for building agents

Advanced extensibility

Customize agents using pro dev tools like Microsoft 365 Agents SDK, VS code & Azure AI

Agent tooling in Business Central

Our goal today...

**Building Custom
Agents with
Copilot Studio**

**For use by your
Employees*,
Customer,
Vendors**

**Securely
connected to
your business
data**

**Thoroughly
Tested**

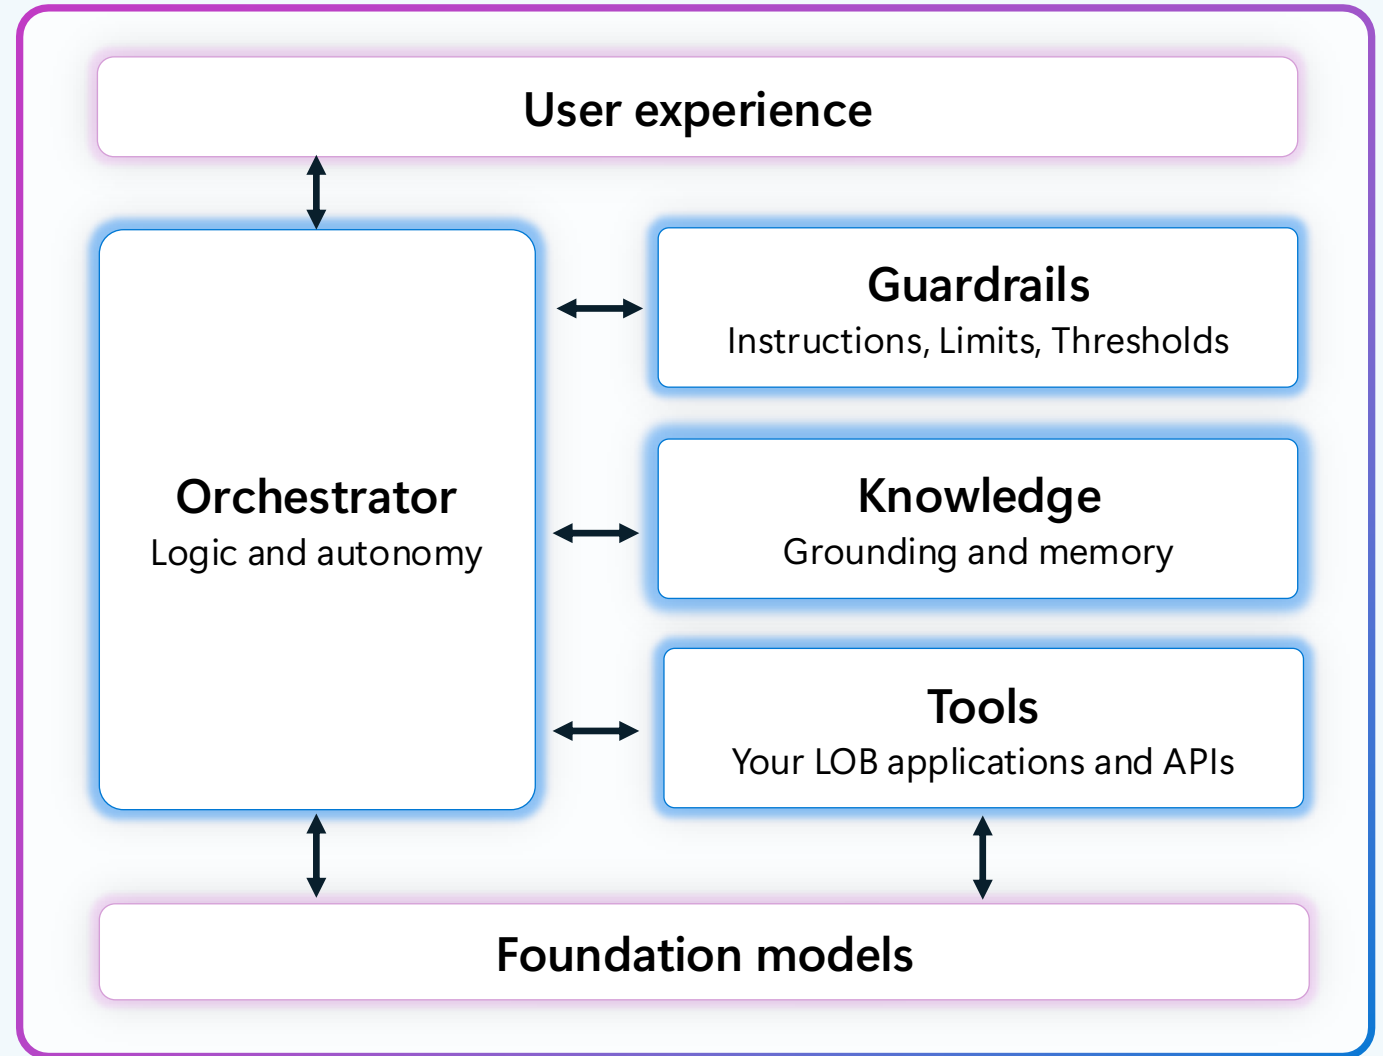

**Deployed in
Teams*, M365
Copilot Chat,
Web, App, etc.**

Anatomy of an agent

What can Copilot Studio Do?

Connecting to Business Central?

Use
Microsoft's
pre-created
v2.0 APIs

Create your
own APIs in
**Visual
Studio
Code**

Use
AppSource
app like
**Simple
Object
Designer**
(in-app)

How to connect to Business Central

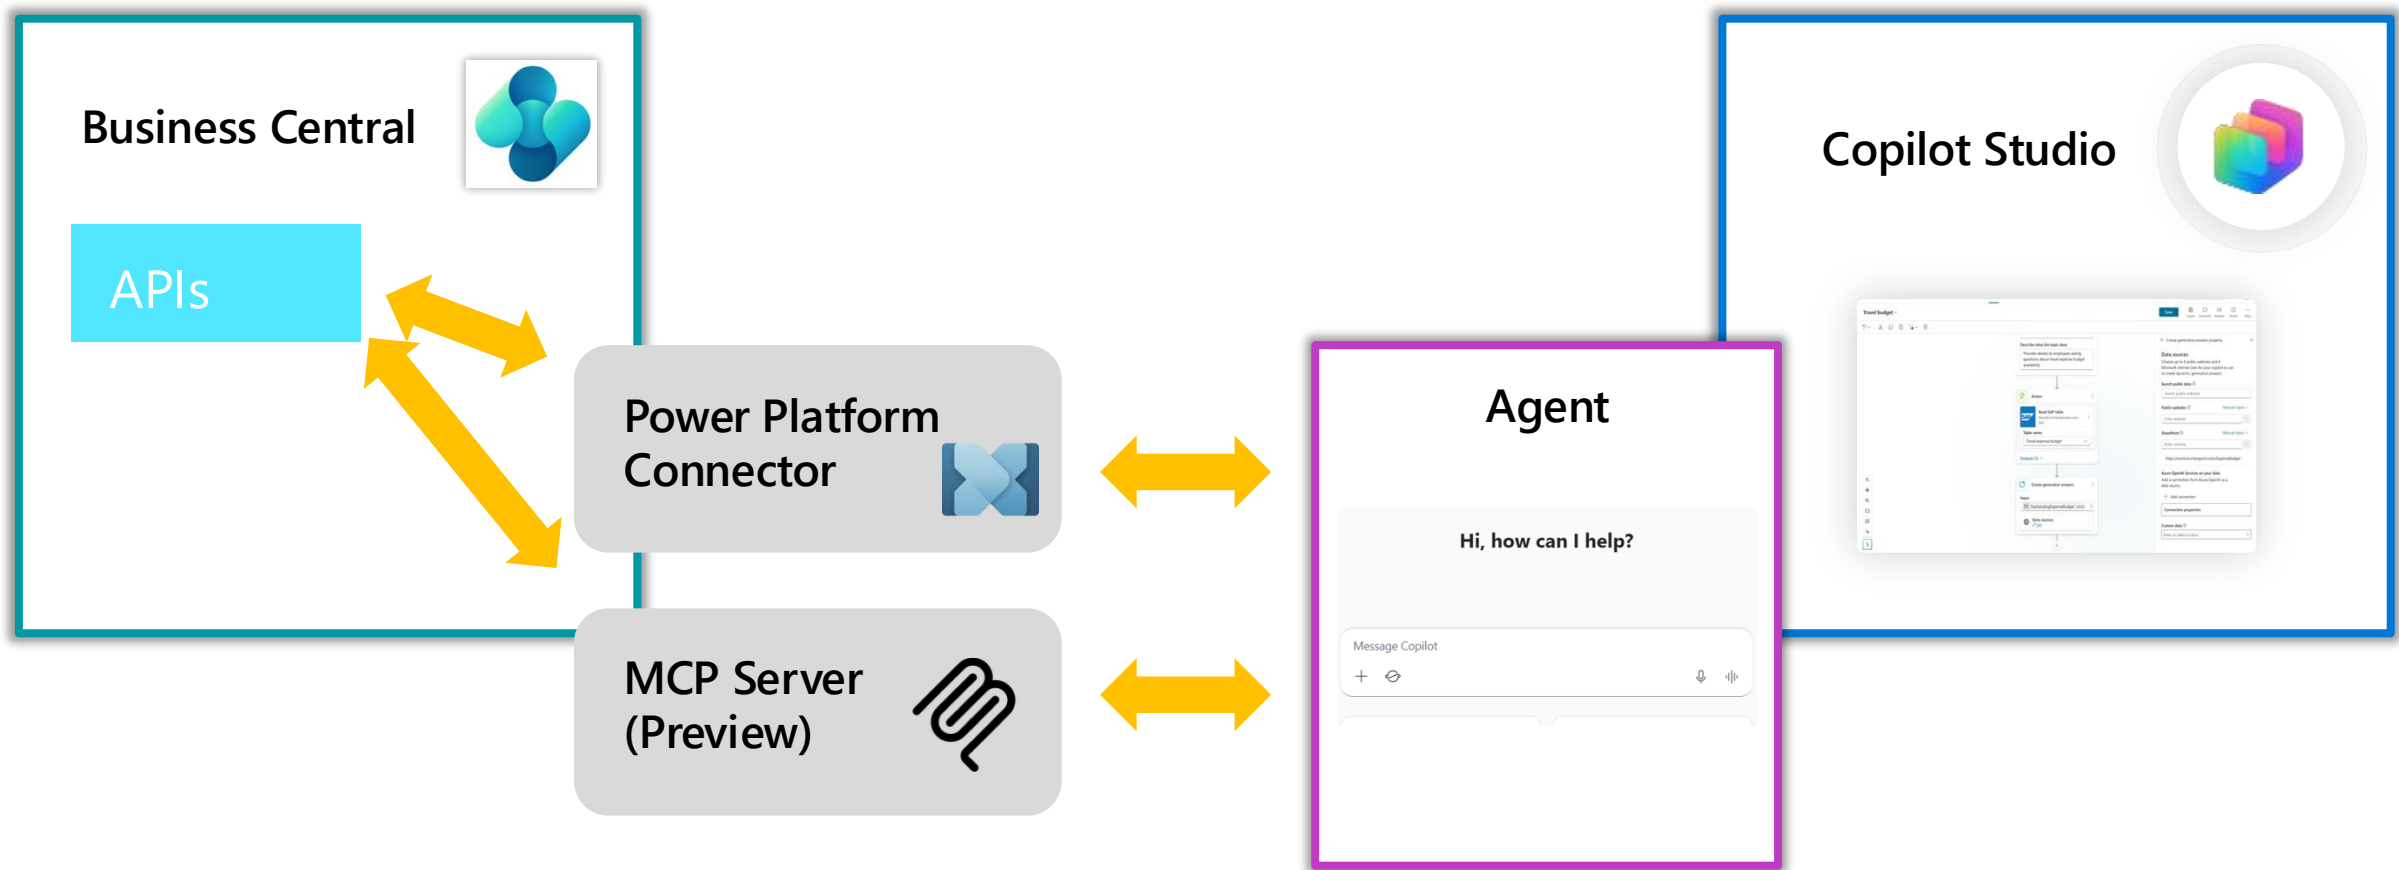

MCP

Agent Flows

Tools > Dataverse

Building Business Central agents in Copilot Studio

My Repos

github.com/ajansari

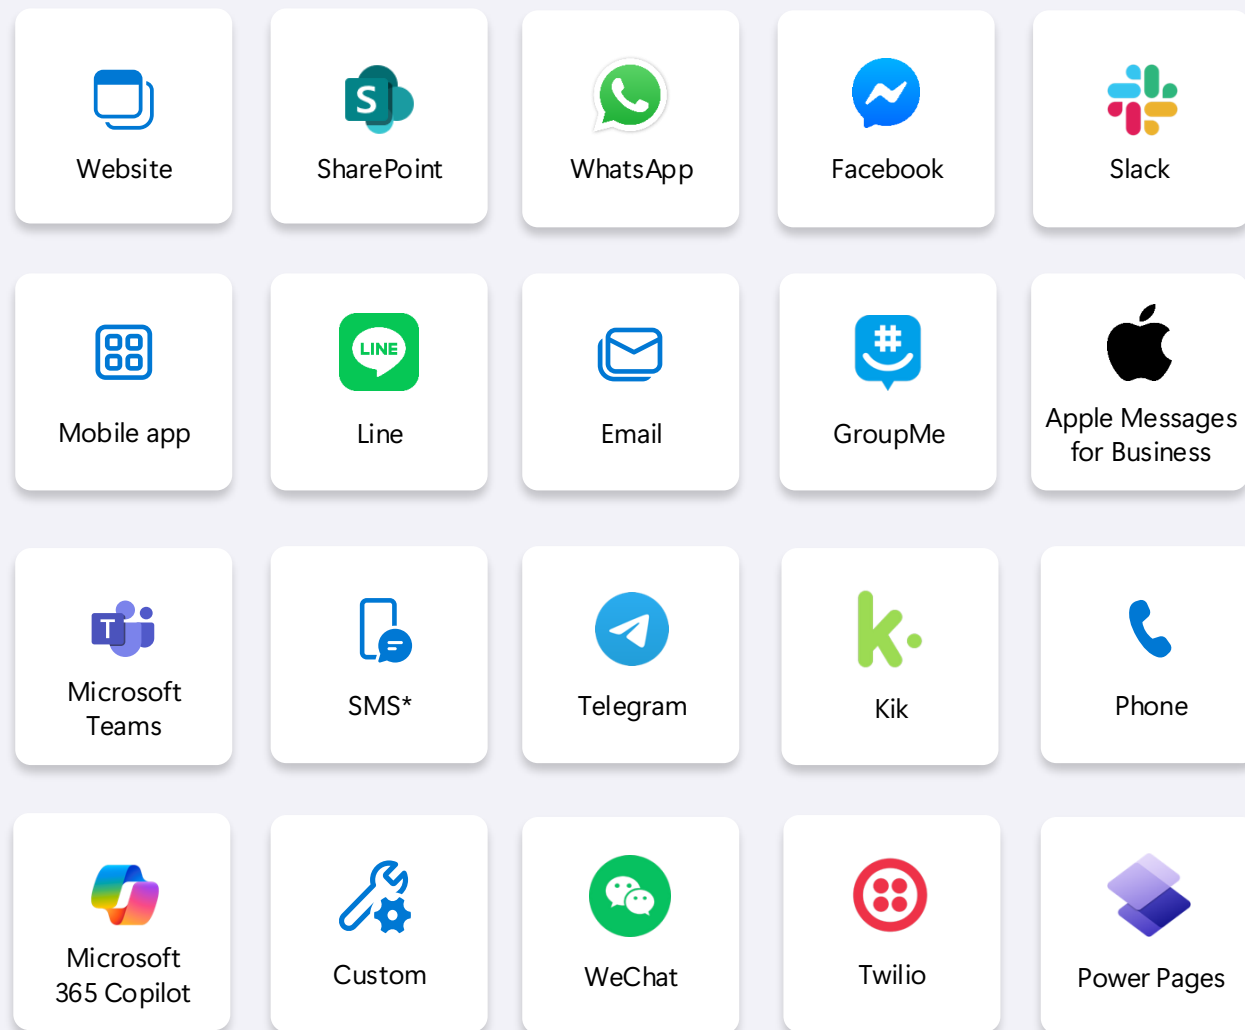

Channels

Easily distribute your agent across **multiple channels** with a single click.

Deploy agents directly to the applications **your employees frequently work in**, such as Microsoft Teams, SharePoint, and Microsoft 365 Copilot Chat.

Get access to **even more channels** beyond what's natively available in Copilot Studio by leveraging Azure Bot Service, Microsoft 365 Agents SDK, Agents Client SDK and Dynamics 365.

Licensing (simplified)

Business Central and Power Platform

Business Central

	Power Automate (limited usage rights)	
	Power Apps (limited usage rights)	
	Power Pages (limited usage rights)	
Access to all premium connectors		
Required: operate on data in context of Business Central		
	Copilot Studio and AI hub	

Billing

Copilot Studio billing

Copilot Studio usage burns "credits"

Full feature parity in both methods

Same burn rate in both methods

Leverage your existing Azure plan with new Pay-as-you go meter

Business Central agent billing - aligned

New

Credit packs

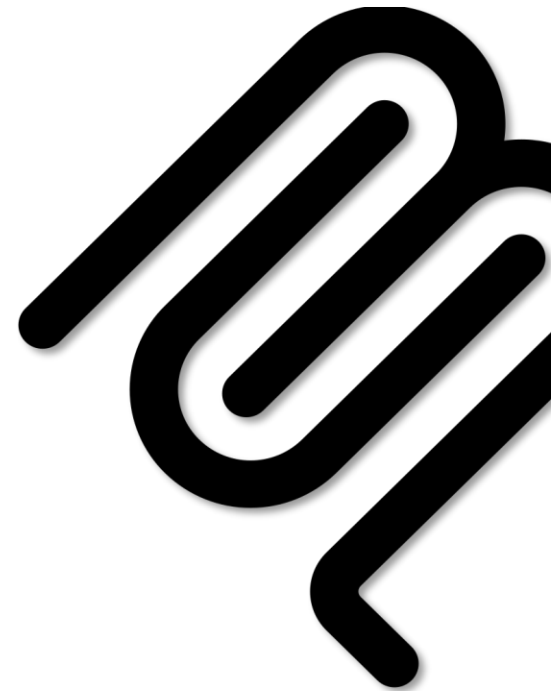

- ✓ Tenant-wide credit pack
- ✓ 25,000 credits/month
- ✓ \$200 per pack/month

Pay-as-you-go

- ✓ New PAYG meter
- ✓ \$0.01/credit
- ✓ Can decrement MACC

Note: no need for any paid user license, Copilot Studio licensing is based only on usage

What is MCP?

MCP Servers in Copilot Studio...

What is MCP?

Model Context Protocol (**MCP**) is an open protocol that standardizes how modern applications provide context to AI (large language models, **LLMs**).

Knowledge and resources

Expose data and content from your servers to LLMs.

Prompts

Create reusable prompt templates and workflows.

Tools

Enable LLMs to perform actions through your server.

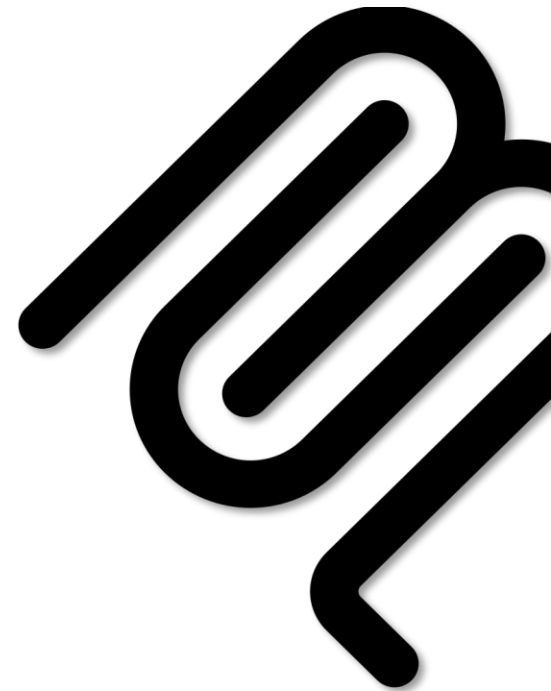

<https://modelcontextprotocol.io/>

Model Context Protocol

Standardizes communication between AI models and external applications / systems

Agents can invoke tools and APIs, and retrieve context

Alternative to traditional custom integrations

Dataverse Use **Considerations**

**Standard Integration
relies on Virtual Tables
or Integration Tables**

**Virtual Table method not
supported for RAG**

**Useful if
Dataverse
needed**

**Virtual Tables:
“Real-time” updates to
BC; interacts with business
logic**

**Reduce load on BC
Can be used to STAGE if
using manual sync with
Integration Tables**
