NOT WHAT WE'RE DOING TODAY

Building custom
agents with
Copilot Studio

For use by your
Employees*,
Customers or
Vendors

Deployed in
Teams*, M365
Copilot Chat,
Website, etc.

Securely
connected to
Business Central

Declarative Agents

Created from M365 Copilot

For Personal Use

Shareable (Individual, Org)

Not centrally managed

"Knowledge" Agent only

Deploy in Copilot Chat and/or Teams

SharePoint Agents

Created from SharePoint

Grounded on knowledge from folders & files in Site Documents

Conversational, Summary & FAQs

Use in SharePoint or Teams

Only available to licensed M365 Copilot Users

The Full Copilot Studio experience

Custom Agents

Created from Copilot Studio

For Organizational Use

Orchestration, Knowledge,
Connectors, Flow, Dataverse

Select your own Model

Enhanced Instructions

Authentication & Deployment
Options

What can Copilot Studio Do?

General Knowledge

Knowledge Sources

AI Orchestration, Instructions, Description

Topics

Actions

Triggers

Let's Go!

github.com/ajansari/CopilotStudioWorkshop

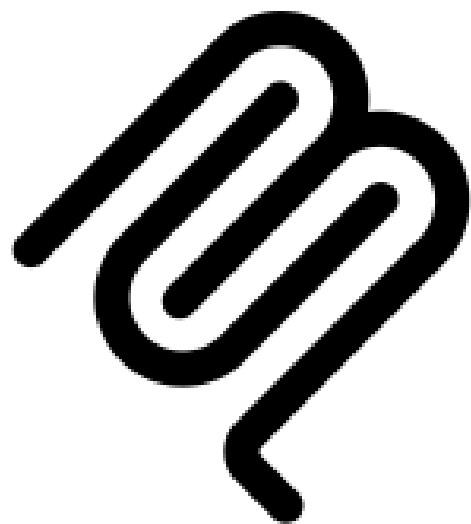

How to connect to Business Central

Action Connectors
(Tools)

Agent Flows

Dataverse

Model Context Protocol*

(coming soon)

Connecting w/ Flows or Actions?

Use Microsoft's
pre-created
v2.0 APIs

Create your
own APIs in
Visual Studio
Code

Use AppSource
app like Simple
Object Designer
(in-app)

What are API Pages?

A method of exposing Data in BC Tables

Designed like a Page, but has no GUI

Faster Alternative and successor to Web Services

Can also contain code that needs to be executed

Agent Flows

Call from Topic or Action

Triggered by Copilot Studio (Solution)

All the flexibility of a Power Automate Flow

Work with BC data AND bound actions (code)

Actions work better for simpler tasks

Action Connectors (Tools)

Prebuilt Actions to Get, Find, Create, Update

Describe, not code

Dynamically populate Input fields

Outputs can be dynamically generated

Choose between Author & User Authentication

Knowledge Source? | Connector?

Dataverse

Requires Dataverse Connection Setup in BC

Additional costs stemming from Dataverse

Connector? RAG?

Not ideal for retrieving large lists of records

Table field names not really intuitive
