

BROUGHT TO YOU BY **ONLYCOPILOTFANS**

WORKSHOP PREPARATION

Copilot Studio for Business Central

Get ready before you arrive.

PRE-FLIGHT CHECKLIST

By the morning of the workshop, you should have:

- A **Copilot Studio developer environment** (Power Platform dev environment with Dataverse), verified by creating a test agent
- A **Business Central online sandbox** in the same tenant as that environment
- Laptop, charger (Euro-compatible if traveling), internet, and a smile

CARDINAL RULE

Your Business Central sandbox must be in the **same tenant as your Copilot Studio developer environment.**

If they are in different tenants, the workshop exercises will not work end-to-end.

1

What to bring

- Your laptop, and a Euro-compatible charger
- Internet connectivity
- Comfortable attire, comfortable shoes and, of course, a smile

2

Create a Copilot Studio developer environment

A Power Platform developer environment with a Dataverse database. You will need an M365 Global Admin, or to be one yourself.

Important. Do not use a production Power Platform environment for this workshop unless you own the tenant and know what you are doing. What you create can impact live business data.

1. Go to admin.powerplatform.com and sign in with your M365 (Entra ID) credentials.
2. Go to **Manage → Environments** and create a new environment. Step-by-step video: youtube.com/watch?v=KmPrliMBDKg

STEP 2, CONTINUED — PAY SPECIAL ATTENTION TO THESE SETTINGS

SETTING	VALUE
Region	United States — Default Recommended Matches the features used in the workshop exercises.
Get new features early	No
Type	Developer
Create on behalf	No by default. Yes, if someone else is creating this for you.
Add a Dataverse data store	Yes (cannot be disabled)
Language	English (United States) Some preview features are English-only. This is on the second screen, after Next.
Security Group	Ask your admin to assign one. If none is available, select None.
Deploy sample apps and data	No

Verify your environment works

1. Once the environment is Ready, go to copilotstudio.microsoft.com and switch to your new environment using the environment switcher (top-right).
2. You may be prompted to sign in again, or to sign up for a Copilot Studio trial (a credit card may be required). Prerequisite: a Microsoft 365 tenant. Hotmail, Gmail and Outlook.com addresses cannot access Copilot Studio.
3. Try creating a new agent: click the big **Create Agent** button.

If copilotstudio.microsoft.com doesn't load, the default Power Platform environment in your tenant likely has no Dataverse store. Open your environment directly instead:
<https://copilotstudio.microsoft.com/environments/<your-environment-id>/home>

If Create Agent fails, go to Power Platform Admin Center → **Manage** → **Tenant settings** and add the **Copilot Studio Author** permission to a Security Group your user belongs to (create one if needed). Also enable **Publish bots with AI features** in Tenant settings.

Optional: Copilot Studio's new experience

To take part in the new-experience exercise (powered by the GitHub Copilot harness), your environment needs a **Copilot Studio credits pack** or **Pay As You Go** billing. Setup video: youtube.com/watch?v=0cnBT61Hc9c

Pay-As-You-Go only? If that is the only Copilot Studio billing model in your tenant, you also need to enable the **Copilot Studio Author** role for anyone who will create agents. As of April 2026:

1. In [Power Platform Admin Center](#), go to **Manage → Tenant Settings → Copilot Studio Authors**. Choose (or create) a Security Group for this role.
2. In [M365 Admin Center](#), go to **Active Users**, select the user, open **Groups**, assign the Security Group and Save.
3. While in Tenant Settings, check **Publish Copilots with AI features** and ensure it is Enabled.

3

Create a Business Central online sandbox

Important. Do not use a production Business Central environment for this workshop unless you own the tenant and know what you are doing. What you create can impact live business data. And remember: this sandbox must be in the **same tenant** as your Copilot Studio developer environment.

1. **Sign in** to the Microsoft 365 Admin Center at admin.microsoft.com with your admin credentials.
2. **Open the Business Central Admin Center** at businesscentral.dynamics.com/admin.
3. **Create a new environment.** In the left menu, click **Environments → + New**, then fill in:
 - Name: a name for your sandbox, e.g. TestSandbox1
 - Type: Sandbox
 - Country/Region: United States (recommended)
 - Version: the latest available
4. **Confirm and create.** Click Create. Provisioning takes a few minutes.
5. **Access the sandbox.** Go to businesscentral.dynamics.com and use the environment selector (top-right) to switch to your new sandbox.

You're ready. See you at the workshop.

If you hit a snag during prep, reach out ahead of time at info@onlycopilotfans.com. Issues are much easier to sort before the workshop than during it, and we would rather you spend the day building agents than wrestling with provisioning.
